Essex Powerlines Corporation (“Essex”) hereby submits a complete application for the approval of distribution rates proposed to be effective May 1, 2017 under the 2017 electricity distribution incentive regulation mechanism (“IRM”).

Essex filed a comprehensive cost of service rebasing application for May 1, 2010 rates, proceeded by way of a Settlement Conference and Agreement, and had rates approved by the Ontario Energy Board under file number EB-2009-0143. Essex will be filing a cost of service rebasing application for 2018 rates.

For purposes of the 2017 IRM application, Essex has followed Chapter 3 of the Filing Requirements for Transmission and Distribution Applications updated on July 14, 2016 (“Filing Requirements”).

Listed below are the specific items to be addressed in the Manager’s Summary and Reflected in the IRM Model:

1. Classification Change
2. Board Approved Tariff of Rates and Changes
3. Settlement Process
4. Billing Determinants
5. Revenue-to-Cost Ratio Adjustments
6. Price Cap Adjustment
7. Shared Tax Savings
8. Deferral and Variance Accounts
9. RTSR Adjustment
10. Rate Design for Residential Customers
11. Proposed Rates and Bill Impacts

The following details of Essex Powerlines rate application are noted below:

1. Classification Change

As identified during our yearly review of all customer account activity, and based on 2015 consumption for all customer classes, Essex will be reclassifying one customer from the GS>50 rate class to the GS 3,000-4,999 kW rate class effective May 1, 2017.

2. Board Approved Tariff of Rates and Charges

Essex Powerlines 2016 Board Approved Tariff of Rates and Charges, as issued March 17, 2016 18, 2015, (EB-2015-0005) was used to pre-populate the 2017 IRM4 Rate

208 Generator model as required and a PDF copy has been included as Appendix A of the
209 application.

210

211 **3. Settlement Process**

212

213 As per the filing requirements, the following is the settlement process at Essex.

214

- 215 1. IESO monthly settlement – submitted by the 4th business day after the
216 calendar month end.
- 217 2. For the Global Adjustment (GA), Essex uses the 1st estimate for billing
218 customers for all rate classes. Timely billing and cash flows are the main
219 reasons for selecting the 1st estimate.
- 220 3. Consumption estimates - Essex uses a data query from its billing system that
221 is downloaded into an Excel spreadsheet which includes all cost of power
222 consumption and segregates, by billing codes, the RPP customer
223 consumption. The RPP customer consumption is divided by the total
224 customer cost of power consumption to determine the RPP percentage
225 portion. The non-RPP portion is determined to be the remaining percentage
226 amount to total to 100 percent.
- 227 4. IESO settlement of RPP – market price - The estimated RPP kWhs are split
228 between RPP categories (on/off/mid peak and tiers 1 and 2) using the most
229 current month RPP billing stats as a proxy. For each RPP category, the
230 associated RPP pricing less a monthly average price issued to determine the
231 RPP settlement amounts with the IESO.
- 232 5. IESO settlement of RPP GA - GA rates (2nd estimate) are also applied to the
233 estimated RPP consumption to estimate the RPP portion of the GA cost
234 which are included for settlement with the IESO.
- 235 6. True up process - The billing system setups are maintained to allow the billing
236 transactions to be analyzed by calendar month. This provides the billing stat
237 information required by calendar month to compare against the estimates.
238 Any difference is incorporated into the settlement process and general ledger
239 accounts as required.
- 240 7. Embedded Generation – the settlement with the IESO relating to embedded
241 generation (FIT, microFIT) is done based on the contract price versus market
242 price on a monthly basis. Essex also purchases energy from Hydro One
243 Networks due to embedded generation in their territory that migrates into
244 Essex's territory.
- 245 8. Accrual accounting – Essex confirms that it uses accrual accounting in its
246 Global Adjustment settlement processes.

247

248

249 **4. Billing Determinants**

250

251 For the prepopulated sheet (sheet 4) of the 2017 IRM4 model, Essex confirms the
252 accuracy of the billing determinants.

253

254 Essex has followed the approach identified in the 2017 IRM Rate Generator model to
255 address wholesale market participants (WMP).

256

257 **5. Revenue-to-Cost Ratio Adjustments**

258

259 Essex has completed all requirements from a previous Board decision (EB-2009-0143)
260 to phase in any revenue-to-cost ratio adjustments. As a result, there are no further
261 requirements for adjustments in the 2017 IRM4 application.

262

263 **6. Price Cap Adjustment**

264

265 Based on the current price cap parameters, the Rate Generator model reflects an
266 adjustment of 1.95%. That calculation is based on a price escalator of 2.1%, less a
267 productivity factor of 0.0%, less a stretch factor of 0.15%.

268

269 **7. Shared Tax Savings**

270

271 Based on the 2017 Shared Tax Work form, Essex is not applying for any shared tax
272 rates. Essex will be disposing of the balance identified of \$47,644 into account 1595
273 as instructed on the Shared tax rate rider sheet within the 2017 rate generator model.

274

275 **8. Deferral and Variance Accounts**

276

277 Essex is currently undergoing an OEB audit and will not be requesting disposition of any
278 deferral and variance accounts. This was discussed with, and agreed to, by OEB audit
279 staff.

280

281 **9. Lost Revenue Adjustment Mechanism Variance Account (LRAMVA)**

282

283 For the reasons identified under the Deferral and Variance heading above, Essex will
284 not be requesting the disposition of any lost revenue as part of its 2017 IRM filing.

285 Essex will be seeking the disposition of any lost revenue from CDM programs during its
286 2018 cost of service filing. The lost revenue to be requested during the cost of service
287 filing will be for the periods 2013-2016 and any persisting lost revenues from programs
288 delivered in 2011 and 2012.

289

290 **10. Retail Transmission Service Rates (RTSR)**

291

292 Essex has adjusted its retail transmission service rates to recover the wholesale
293 transmission, network and connection costs that it will be charging to customers. Essex
294 has used the worksheets included in the 2017 IRM rate generator model.

295

296 Essex used the wholesale quantities billed for 2015 and Hydro One Sub-Transmission
297 class rates from 2016 to calculate the forecasted rates for 2017.

298

299 **11. Rate Design for Residential Customers**

300

301 Essex has incorporated the second phase of the transition to a fully fixed monthly
302 distribution service charge in this application. The phase-in period is assumed to be
303 implemented over a four year period beginning in 2016. The resulting increase to
304 Essex's monthly service charge, as shown in Tab 15 Rev2Cost_GDPIPI is calculated to
305 be \$3.77, which is within the \$4 threshold identified in the filing requirements.

306

307 Essex also reviewed residential customers at the 10th consumption percentile to ensure
308 that the new rate design along with other rate changes included in this application are
309 not causing a total bill impact of 10% or greater. As shown in section 11 below, the
310 impact is 6.8%.

311

312 To determine the 10th consumption percentile, Essex used the following steps:

313

314 1. Our billing software provider extracted billing data by customer account from the
315 billing system. The data included consumption for residential customers for
316 meter readings between January 1, 2015 to December 31, 2015.

317 2. The data was sorted and summarized by customer account. The consumption
318 was divided by the total bill days to obtain a daily average. The daily average
319 was multiplied by 30 to get an average consumption for 30 days.

320 3. The monthly average was then sorted and zero values removed in order to
321 determine the 10th percentile.

322 4. The 10th percentile customer consumptions were then averaged. The overall
323 average was determined to be 254 kWh per month.

324 5. The average consumption of 254 kWh per month was included in the bill impact
325 calculations.

Below is a GA calculation based on non-RPP consumption data minus Class A consumption. If a Class B customer switched into Class A during the 2015 rate year click this checkbox:

Identify the total billed consumption for former Class B customers prior to becoming Class A customers (i.e. Jan.1 to June 30, 2015) in columns G.

The purpose of this tab is to calculate the GA rate riders for all current Class B customers of the distributor. Effective January 2017, the billing determinant and all rate riders for the disposition of GA balances will be calculated on an energy basis (kWhs) regardless of the billing determinant used for distribution rates for the particular class (see Chapter 3, Filing Requirements, section 3.2.5.2)

¹ When calculating the revenue reconciliation for distributors with Class A customers, the balances of sub-account 1580-CBR Class A and B will not be taken into consideration since the rate riders, if any, are calculated outside of the model.

² Only for rate classes with WMP customers are the Deferral/Variance Account Rate Riders for Non-WMP (column H and J) calculated separately. For all rate classes without WMP customers, balances in account 1580 and 1588 are included in column G and disposed through a combined Deferral/Variance Account and Rate Rider.

In the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Tab 10. For Hydro One Sub-transmission rates, if you are charged a combined Line and Transformer connection rate, please ensure that both the Line Connection and Transformation Connection columns are completed.
If any of the Hydro One Sub-transmission rates (column E, I and M) are highlighted in orange, please double check the billing data entered in "Units Billed" and "Amount" columns. The highlighted rates do not match the Hydro One Sub-transmission rates approved for that time period. If data has been entered correctly, please provide explanation for the discrepancy in rates.

Incentive Regulation Model for 2017 Filers

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. **To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (in other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to page 9 of the Filing Requirements For Electricity Distribution Rate Applications issued July 14, 2016.**

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

Note:

- For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2016 of \$0.113/kWh (IESO's Monthly Market Report for May 2016, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- Due to the change to energy consumption used in the calculation of GA rate riders for the 2017 rate year, the separate "GA Rate Riders" line is only applicable to the "Proposed" section of the bill impact tables.
- Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.
